A. Infrastructure (Body)

{Nvidia/Physics/Invariants}

- Physics: kWh (Datacenter)
- Chemistry: Silicon (GPUs, TPUs)
- Biology: PFC (ie cloud eg Azure)
- Psychology: Models (GPT)
- Sociology: Apps (Ukubona)

B. Cognitive Architecture (Mind)

{Google/Biology/Outsourcing}

- Corticothalamic: **A Priori (Model)**
- Thalamus: Sensory + Gating
- PFC (bits/kWh: TPU vs GPU)
- DMN: Update/Prompt + Hallucinate
- Hippocampus: **Posteriori + Credibility + Origins**

C. Behavioral Geometry (Soul)

{Ukubona/Sociology/Raindrop}

- State, Transition: (x, y)
- Change: $y(t \mid x) + \epsilon$
- Rate of Change: $\frac{dy_x}{dt}$
- Change of Rate: $\frac{dy_{\{\bar{x}\}}}{dt} \pm z \sqrt{\frac{d^2 y_x}{dt^2}}$
- Estate: $\int y_x \, dt + \epsilon_x \, t + C_x$

The Default Mode Network is the combinatorial search space. When you're not task-focused, you're not idle—you're running simulations. Testing identities. Generating counterfactuals. Asking "what if I were the kind of person who..." That's not decorative introspection; it's **active model exploration in the space of possible selves (by your DT, your digital twin).**

The UI (LLM + API) will be the geometry
Dialogue with the BT (biological twin) will be the exploration (z) & perspectivism
We shall not stop from exploration (ie abiding our local conditions)
And the end of all our exploring (ie not settling in local minima)
Might be to begin where started (stochastic gradient descent, saddle points)
Perhaps know the place for the first time? (dissipation of all energies)
