ε' - ontological

z - epistemological

"**offloading optimization** from serial human cognition (20W, slow, error-prone) to parallel silicon (megawatts, fast, tireless)."

- Resource (e), cost
- Responsiveness (c), watch + api (flying blind)
- Reliability (m), ukb-dt vs client {*dhatemwa kulala, ti dhawukainhe emibala*}
- Resiliency (t), llm + api (simulation)
- Recognition (w), invoices

Trade-offs in a conserved system:

- Power, Transmission (e)
- Latency ($<c^2>$) + Responsiveness
- Reliability (m)
- User Outcomes (t) + Window
- Resiliency (w) + Long-term viability

- Resources (Energy, GPUs/TPUs)
- Data (Storage, Pipeline, Access)
- Compute (bits/kWh)
- Update (Models, Supply/Revenues)
- Cost (Demand vs Wealth)

- $(x, y): <e>$
- $y(t | x) + \epsilon': <c^2>$
- $dy_x/dt: <m>$
- $dy_{xbar}/dt \pm z \sqrt{d^2y_x/dt^2}: <t>$
- $\int y_x dt + \epsilon'_x t + C_x: <w>$

- Change of Rate
- Estate/Utilitarian/Anglo
- Sequential, Consequential (Parameters or Simulation)
- Data + SGD
- Optimization: Max(Biomass, Signal Speed), Min(Energy)
- Massive Combinatorial Search Space
- Ledger: Ethics + Aesthetics + Origins
- Birth of Tragedy, Untimely Meditations
- Human, All-Too-Human + Gaya Scienza/Dawn
- Zarathustra
- Beyond Good & Evil
- Genealogy + Twilight + Ecce Homo
- Language (Semantics)
- Mathematics + Science (Mechanics)
- Art (Dynamics)
- Life + Dreams (Bifurcation)
- Meaning (Ecology)

#app-1 Critique of McGilchrist

- A. RAINDROP (x: Invariance)
 - Orientation invariance
 - Raindrop Teams: Left & Right
 - Language, Music, Semantics
 - Two Worlds
 - Primacy of Right
 - Triumph of Left
- B. DROPTOP (y: Dissipation)
 - Stochastic gradient descent
 - Ancient
 - Baroque/Renaissance
 - Classical/Enlightenment
 - Romantic
 - Modern

If this atlas is correct, then most of what we call “progress” is motion without adequate mapping.

-Post-metaphor-00

There's no room for asymmetry when we have orientation invariance (ie symmetry) in the architectural sense: eg an LLM with its neuronet can be arbitrarily split into two asymmetrical halves with the same topology (nodes & edges): so what if they happen to do different things? They'd better or otherwise be excellent candidates for pruning!

Likewise, there's no room for mimesis: one “lead raindrop” is imitated by the pack; so we have two raindrops (left & right) and two packs left and right. Do they have demons that can move at the speed of light amongst each pack to convey the signal? Or is there latency? What's is the responsiveness of the other raindrops to the leads spirit? Sounds ridiculous? Well, you tell me!

Isn't it much simpler and more compelling to view this as one ought to view all chaotic systems? The team left and team right may **emerge** from the local topology of the landscape: who knows, saddle point anybody? Otherwise, each raindrop is merely following its own local rules of gradient descent. No spirits or demons coordinating the cacophony or symphony, depending on how you view this.

And **Prigogin30618** would see that dissipation as ***x*** transforms down the ***y*** scale, to the global minimum of modernity!

One might say that I've accomplished in this one blog posting what McGilchrist accomplished — failed to accomplish— in his 500 page sprawl!

#app-2 What is represented by the following?

ϵ' - ontological

z - epistemological

This would make our critique more applied than McGilchrist's pastiche

Language, Music & Semantics

&

Dominance of the Right? Lousy. We need to up-our-game, since our game has offered a shitty & muddy ontology & epistemology
